Summary

Computer Science and Engineering graduate from BRAC University building backend systems, full stack web products, Flutter applications and custom game server resources. Experience spans database design, secure APIs, booking and payment workflows and interactive 3D interfaces. Lead developer on a locally hosted emotional support conversational AI research project, with skills in prompt engineering and efficient integration of AI APIs.

Education

BRAC University Graduated September 2026
BSc in Computer Science & Engineering *Dhaka, Bangladesh*
Coursework: Data Structures & Algorithms, Object Oriented Programming, Databases, Operating Systems, Machine Learning and Artificial Intelligence, Software Engineering and Web Development.

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, Dart, Lua, C++, C, PHP, SQL.
Backend: Node.js, Express, Django, Django REST Framework, REST APIs, Socket.IO, Supabase Edge Functions.
Frontend & mobile: React, Next.js, Tailwind CSS, HTML/CSS, Three.js, Flutter, Riverpod.
Databases: MongoDB, PostgreSQL, PostGIS, MySQL, Supabase Auth, Storage and Realtime.
Tools & integrations: Git, Docker, Linux, Postman, Vercel, Railway, Google Maps APIs, SSLCOMMERZ.
AI & APIs: OpenAI, Groq and Gemini APIs, prompt engineering, context and token management, cost aware API usage and response quality evaluation.
Engineering: Role based access control, row level security, database transactions, game server scripting and plugin integration.

Selected Projects

Vehicle Booking App GitHub (private)
Flutter, Dart, Riverpod, Supabase, PostgreSQL/PostGIS, Google Maps, SSLCOMMERZ

- Built a role aware application for customers, vehicle providers, drivers and administrators, supporting full vehicle hire and single seat reservations along compatible route segments.
- Implemented route search, trip scoped seat inventory, expiring holds and overlap protection, keeping pricing, authorization and atomic booking transitions in PostgreSQL.
- Integrated Google Maps location and route services, driver trip workflows and hosted SSLCOMMERZ checkout with server side session creation and idempotent payment reconciliation.
- Applied row level security, private storage and server only privileged operations and included Flutter unit/widget tests and pgTAP database tests.
- Added provider workflows for vehicles, drivers, availability, verification and earnings, alongside notifications, reviews, support tickets and administrative dispute handling.

Bake Smart: Interactive Cake Ordering Live
MongoDB, Express, React, Node.js, Three.js

- Developed a custom cake ordering product with a real time Three.js cake builder and interactive 3D previews to support visual product customization.
- Combined the customization experience with an online bakery catalog covering cakes, cookies, pastries, breads and other products, giving customers a common entry point for browsing and ordering.

Digital Wedding Invitation Live
TypeScript, Vite, Vercel | Collaborative project

- Developed the invitation website from scratch jointly with a friend, combining a personalized presentation with an interactive wax seal opening and a custom visual design.
- Built a themed invitation with a couple's monogram, floral imagery and a guest facing opening screen and organized wedding content separately from the TypeScript/Vite presentation.

Projects Continued

AFK Productions: Website & System GitHub

Next.js, React, JavaScript, Tailwind CSS, Framer Motion / Collaborative project

- Contributed to AFK Productions' website and supporting system, presenting tournament details, registration, organizers, sponsors, partners, prize pools and event roadmaps.
- Worked on a component based event presentation with navigation, dedicated information sections and animated interface elements to help visitors explore the tournament and participation details.

Additional Web Development

Bento Clone Live

Developed a responsive link in bio and portfolio platform using React, Node.js and MongoDB. Combined an account flow with animated, customizable grid layouts so creators can present their profiles, links and content through a single shareable page.

Hytale Bangladesh Live

Built a React/Node.js community website introducing an extraction style MMORPG server. Organized gameplay information, community vision, launch FAQs and Discord onboarding to help prospective players understand the server and join the community.

Rust BD Live

Developed a React, Vite and Tailwind website with live server status presentation, player counts and direct Steam connection links. Added wipe schedules, gameplay rules, reporting guidance and Discord community information to support player onboarding.

Bangladeshi Minecraft Society Live

Created a React community website and server storefront with rank tiers, crate keys, virtual currency packages and a shopping cart. Added BDT/USD display options, server information and a bKash payment verification receipt flow for claiming purchased items.

Celestial Roleplay Live

Built a React portal for a Bangladesh based roleplay community, connecting the main hub with store, business, department and team sections. Included account access entry points, a server status display and direct server and Discord links.

Epi Predict Live

Developed a public health decision support prototype with an interactive dashboard for exploring health indicators, geography and forecast horizons. Used illustrative sample data to demonstrate trend charts, community vulnerability and resource planning interfaces.

Personal Portfolio Live

Designed a React/TypeScript portfolio combining developer projects and esports operations in two dedicated modes. Brought together interactive 3D interfaces, project previews, technical skills, education, certifications and contact links.

Restaurant Platform

Django, Python, JavaScript, HTML/CSS

Developed a restaurant web application combining menu management, ordering flows and a responsive customer interface. Organized browsing and ordering within one application backed by Django.

Store Website

HTML, CSS, JavaScript, PHP

Built a store website using HTML/CSS for page structure and styling, JavaScript for browser side interaction and PHP for server side functionality.

Game Development, Plugins & Mods

3D Fruit Ninja GitHub

Developer in a team of three | Python, OpenGL, PyOpenGL | CSE423 project

- Developed a 3D game with two teammates in which players slice airborne fruit with a sword while avoiding bombs, earning points and managing limited lives.
- Contributed to a game featuring unlockable swords, player movement, camera switching, pause and restart controls within a rendered 3D environment.

CoreLogic & Custom Game Server Resources Store

Lua scripting, FiveM resources, server configuration and community operations

- Developed custom Lua plugins, scripts and modifications for different games, including configurable FiveM resources presented through the CoreLogic storefront.
- Worked across survival, sandbox and roleplay server environments on scripting, plugin integration, anti cheat configuration, economies and community operations.
- Adapted resources to different server requirements through configurable behavior and integration with existing gameplay systems, balancing customization with ongoing server maintenance.

CheckHacks & StellarProtect: Existing Plugin Enhancements CheckHacks | StellarProtect

Java, Maven, Paper/Folia | Contributions to existing Minecraft plugins

- Updated CheckHacks for server version compatibility and Folia support, adapting scheduled checks, player tasks and timeout handling through FoliaLib.
- Migrated relevant CheckHacks scheduling to entity aware tasks and updated build dependencies and plugin metadata to support the target server environment.
- Improved StellarProtect's version detection and optional plugin hooks, removed local JAR dependencies for integrations and guarded metrics shutdown against null state.
- Reworked optional StellarProtect integrations to register events dynamically, reducing hard build time dependencies on third party plugin JARs.

Research Project

Lead Developer: Local Emotional Support Conversational AI 2025 to 2026

Undergraduate research | Python, QLoRA, Mistral, Qwen, DeepSeek, Llama, Gradio, MongoDB

- Led software development of a locally hosted chatbot for empathetic, non clinical emotional support, integrating language model adaptation, response checks and conversational memory.
- Worked on a QLoRA based pipeline for comparing Mistral, Qwen, DeepSeek and Llama model families on consumer hardware, using quantized adaptation to reduce training memory requirements.
- Implemented response quality checks, guided regeneration and fallback handling, alongside a Gradio interface, optional MongoDB memory and user feedback mechanisms. Connected response checks to bounded correction before delivering replies.
- Integrated privacy safeguards, including identifier redaction and pseudonymous session tracking.
- Combined conversation history and user feedback with prompt guidance while keeping model weights fixed during conversations and supported comparative evaluation of response quality and consistency.

KAISER FAHIM kaiserfahim.me/developing

Professional Experience & Leadership

AFK Productions: Head of Operations 2024 to 2025

Esports production and event management | Crew of 25+ members

- Directed day to day operations for a crew of more than 25 members across esports event management and production, coordinating schedules, crew assignments and delivery priorities.
- Aligned production and event teams on logistics, deadlines and event requirements and managed operational communication and issue resolution during preparation and live delivery.

BYDESA: Office Secretary 2022 to 2026

Bangladesh Youth Development & Electronic Sports Association

- Coordinated office correspondence, organizational records and meeting arrangements, supporting administrative work and communication between association members and leadership.

Esports Event Organization

D1 Cup Bangladesh Season 1: VALORANT Segment

Event Organizer | Grand finale at ICCB

- Organized the VALORANT segment of Bangladesh's biggest esports event, bringing together Dota 2, Mobile Legends: Bang Bang and VALORANT with a combined prize pool of BDT 40,50,000.
- Led event organization for the VALORANT sector as part of the wider competition, culminating in the grand finale at International Convention City Bashundhara in Dhaka.

Predator League Bangladesh 2024 Liquipedia

Organizer | September to October 2023 | VALORANT OFF//SEASON

- Organized Bangladesh's first national qualifier for the Riot Games VALORANT OFF//SEASON series, featuring 128 teams and a total prize pool of BDT 455,000.
- The tournament combined online competition with the lower final and grand final at Independent University Bangladesh. The winner qualified for APAC Predator League.

Certifications

Aspire Leaders Program (2024): Global leadership development and peer learning. Certificate

HackerRank

Programming and SQL skills assessments.

Python (Basic): Core Python syntax, data types and functions. Certificate

Java (Basic): Java language and object oriented programming fundamentals. Certificate

JavaScript (Basic): JavaScript language fundamentals and functions. Certificate

Problem Solving (Intermediate): Algorithms and data structure problem solving. Certificate

SQL (Advanced): Advanced SQL querying and analytical problem solving. Certificate

DataCamp

Completed courses in machine learning concepts and Python data analysis.

Understanding Machine Learning: ML concepts and model workflows. May 13, 2026. Certificate

Cleaning Data in Python: Preparing and cleaning datasets. April 21, 2026. Certificate

Introduction to NumPy: Numerical computing with arrays. March 28, 2026. Certificate

Joining Data with pandas: Combining related datasets. March 28, 2026. Certificate

Reshaping Data with pandas: Reorganizing tabular data. March 28, 2026. Certificate
